

Information Technology (IT) Administrator

Trakus delivers state-of-the-art wireless tracking systems to horse racing. Our technology offers real-time spatial tracking, with proprietary data, applications, and innovative graphical media enhancements for broadcast, interactive, and mobile platforms. We're seeking talented individuals at all levels to add to our team. Come experience true innovation with Trakus.

Ideal Candidate:

- B.S. in a Computer Science (or similar) with 7+ years of corporate IT experience and proven knowledge working in a commercial networking/data center environment.
- Advanced hands-on experience with broadband networking equipment and protocols, including routers, managing multiple T1s, DNS, VPNs, etc; helpdesk / call center experience a plus.
- Proficient in network administration and operating systems, including Windows, Unix, Linux, Mac.
- Knowledge of SQL database administration, XML, ASP, Flash, web services.
- Enthusiasm for technology, media, and sports; willingness to travel, as needed.

Responsibilities:

- Responsible for all maintenance, support, and upgrades of corporate infrastructure, including multiple ISPs, all sub-domains, Trakus data center and NOC, all security, virus protection, and desktop support.
- Manage, make recommendations, and maintain all external network software and communications links, including all Trakus websites, intranets, and extranets.
- Conduct periodic capacity planning (bandwidth, storage, processing, location, transitions) and make IT-related purchase recommendations; maintain all user licenses; respond to helpdesk requests.
- Responsible for WWW/MMS tracking statistics, and report generation.
- Perform periodic backups and maintenance of production systems (patches, anti-virus, etc).
- Capable of independently troubleshooting networking issues and seeking IT-related improvements in Trakus system performance (e.g., broadband connectivity between Trakus and partner racetracks).
- Strong individual contributor for developing and implementing SOPs for fail-over/redundancy, including making recommendations for required equipment and/or other resources.
- On-call during live race coverage; may require occasional travel for onsite customer support.
