

Production Assistant / Apps Release Engineer

Trakus delivers state-of-the-art wireless tracking systems to horse racing. Our technology offers real-time spatial tracking, with proprietary data, applications, and innovative graphical media enhancements for broadcast, interactive, and mobile platforms. We're seeking talented individuals at all levels to add to our team. Come experience true innovation with Trakus.

Ideal Candidate:

- A.S. or B.S. (preferred); 4+ years experience in video production, commercial data center / network operations center, software services, and/or related customer support function.
- General knowledge of software/multimedia application development/release processes, graphic design, QC/SQA, hands-on troubleshooting; enjoys working in multi-disciplinary team environment.
- Familiar with live television production and control room operations; knowledgeable with A/V distribution flow; understanding of horse racing and simulcast video production highly desirable.
- Collaborate with Trakus product development team; working with software engineers, graphic designers, and operations staff to manage fielded production software and digital media assets.
- Strong organizational aptitude and interpersonal skills, excellent written and oral communication.
- Entrepreneurial experience, flexible "can-do" attitude, willing to travel.

Responsibilities:

- Work closely with Trakus production staff and partner racetrack operators to develop and implement graphics and templates for use with Trakus Virtuoso Graphics Platform; implement (or prototype) and test concepts and layouts to respond to customer requests.
- Responsible for release of Virtuoso application software and associated digital media assets, adhering to Trakus SQA standards; proficiency in Perforce (or other source control) required.
- Design, implement, and manage graphics modules; develop and maintain associated documentation and specifications; review and provide input to graphics operator training processes and manuals.
- Develop production test plans; perform unit/function tests, system tests, and regression tests; work closely with Trakus development engineers to incorporate new feature sets and operator controls.
- Must be hard working and willing to take direction; responsive to urgent requests.
- Familiarity with graphics design tools, creative skills, and/or SQL knowledge highly desirable.
- Some travel is required for this position.
